Green Resolve and the regrowth of a people through perfume, cologne and green energy under a blockchain technology.

A concept created was to create an Ideal perfume/cologne interpreted to help the native poverty level with a concept as perfume and cologne. Our concept is to have the leftover stalks, crops etc in the states of washington colorado and nationwide in order to make natur sustainable and create green energy scents.

We are seeking green energy funding and validation to build and create the block system. We have used API links as the first designation of partnerships to be connected to fulfill this blockchain using the website and brand as the centerpoint. After all a website and linkage is a collection of databases and data in reference to an initial block anyway such as an NFT. Our initial concept is to connect with. In regards to this venture. Tulip Town in Washington State to

supply the leftover flowers for sequencing with oils in order for Royal Aroma to help create the initial scents and set up with manufacturing or processing capacity. Royalaroma is also welcome to help take this venture on. Maybe something as simple as a perfume or cologne is a way forward to profitability for a hindered people.. And if so I am glad to help fulfill this venture in creative capacity. This should also help pittsburgh create a new industry of scent fabrication. Adding to the global marketplace and collective in a more environmentally friendly capacity.
